

Spill Containment Caddy

The Single Solution for Drum Handling Safety, Mobile Dispensing Capability, and Built-In Spill Containment!

The Gator™ Spill Containment Caddy offers you convenient handling and dispensing of hazardous chemicals with complete assurance of compliance with EPA and OSHA regulations. It is the ideal choice for managing either 55- or 30-gallon drums; a double loop strap holds drums securely in place.

Drum Management - Transport up to 600 lb. loads easily and safely minimizing back strain and injuries. Ergonomically designed for tipping, with back kickplate positioned to assure weight is not absorbed by the spinal column. Big rounded handles accommodate heavy work gloves for comfortable gripping. Large 10" (25.4cm) wheels roll easily over shop floors.

Spill Control - Should a spill occur, or even if the drum leaks or splits a seam, the oversized 66-gallon spill sump will contain the chemical eliminating both the hazards and hassles of a chemical spill in your facility. Exclusive "open view" sump design makes clean-up simple and quick. **Chemical**

Resistance- Gator-Tuff UV protected polyethylene construction provides maximum chemical compatibility and resistance preventing corrosion and deterioration, assuring a long lifetime of service. One piece body eliminates leaks. **Outdoor Caddy** - Offers all the convenience and protection described above with the additional advantages of pneumatic tires. The outdoor caddy moves smoothly and steadily over rough, bumpy terrain.

Drum Management System

Modules Combine Efficient Drum Storage, Positive Spill Control, and Safe Liquid Dispensing

The Gator™ Drum Management System meets safety and environmental protection requirements while organizing drum storage for maximum efficiency, productivity, and cost savings. The design accommodates either 30- or 55-gallon drums - Class 1B or 1C flammables and combustibles. Space-saving design is also ideal for storage of non-hazardous liquids. Gator-Tuff UV protected polyethylene construction provides maximum chemical compatibility and resistance preventing corrosion and deterioration, assuring a long lifetime of service. The system consists of three modules: base, stack and dispensing shelf. **The Base Module** is the key component of this Gator system. It's designed to accommodate two drums with a load capacity of 3,000 lb. (1364kg) in total. The dispensing well conveniently holds either 5-gallon safety cans or 6-gallon pails. Forklift channels facilitate relocation within the plant. The system's generous 66-gallon "open view" spill containment sump is located in this module. Spills, even drips of hazardous chemicals, are easy to spot and quickly cleaned up with this wide open design. **The Stack Module** doubles system capacity holding an additional 2 drums. Load capacity 1500 lb. (680kg). When storing both 55- and 30-gallon drums the smaller drums should be placed on top, in this stack module. **The Dispensing Shelf** with a load capacity of 60 lb. (72kg) mounts securely to this module for convenience in dispensing from the upper level.
